

Test cases

ID	Test case objective	Conditions	Testing steps	Expected results	Actual results	Status (Pass / Fail)
1	Verifying that login fails when any incorrect or empty credentials are entered while logging in.	- The Login page is displayed.	1. Open the application. 2. Enter an incorrect password or email or leave it empty. 3. Press login. 4. Observe the outcome.	Error messages such as 'Invalid email / password' and 'Please fill in the blanks' are shown.	The user will be prompted to input valid emails and passwords. (Figure 1)	Pass
2	Verifying login succeeds whenever the user inputs a valid email and password.	- The Login page is displayed. - User accounts are valid.	1. Open the mobile application. 2. Enter the valid email and password. 3. Press login. 4. Wait for authentication to complete. 5. Observe the outcome.	The user has been authenticated successfully and is redirected to the main page of the application.	The user will be redirected to the main page of the mobile application. (Figure 2)	Pass
3	Verify that only valid admins can login to the admin dashboard.	- The Login page is displayed. - Admin accounts are valid.	1. Open the admin dashboard login page. 2. Enter valid admin email and password. 3. Click login. 4. Wait for authentication to complete. 5. Look at the outcome.	The admin has been authenticated successfully and is redirected to the admin dashboard.	The admin is verified and redirected to the admin dashboard. (Figure 3)	Pass
4	Verify that invalid user	- The Login page	1. Open the admin	Error message	Two different error	Pass

	accounts are denied access into the admin dashboard.	is displayed.	dashboard login page. 2. Enter an incorrect email and password or leave it empty. 3. Click login. 4. Look at the outcome.	prompting admin to enter a valid email and password or fill it in.	messages will be displayed such as 'Invalid email and password' and 'Email address and password are required' depending on whether they left it blank or entered incorrect information. (Figure 4)	
5	Verify that users who tried to log in and are not admin will be denied.	- The Login page is displayed. - Valid user account.	1. Open admin dashboard login page. 2. Enter a valid user email and password. 3. Click login. 4. Observe outcomes.	The user will be denied access and an error message letting the user know that they do not have admin access would be displayed.	The user will not be redirected into the admin dashboard page and the error message 'This account does not have admin access' will be displayed. (Figure 5)	Pass
6	Verify that admins are able to change the roles of the user by giving them admin access or revoking the admin access.	- Administrator is logged into the admin dashboard. - A minimum of one user account exists in the	1. Log into the admin dashboard. 2. Navigate to the user's management page. 3. Select an existing user in the list.	The user role will be updated in the database, their new role will be shown in the dashboard, and they will be	The selected user's role will be updated successfully in the dashboard and database. (Figure	Pass

		system. - Administrator has permission to change the roles of users.	4. Change the user's role from User to Administrator. 5. Confirm the changes. 6. Refresh and view the list.	granted admin access and redirected into the admin dashboard page or they will be denied access.	6)	
7	Validate that an administrator is able to generate a secure QR code.	- Administrator is logged into the admin dashboard.	1. Log into the admin dashboard. 2. Navigate to the QR generation page. 3. Enter a destination URL. 4. Implement expiry duration of the QR code. 5. Click on generate QR code. 6. Examine the QR code generated.	A signed JWT token is created and successfully stored in the database of the QR code.	The system effectively created a distinct QR code with the targeted URL and expiry time shown accurately. QR code can also be downloaded and printed. (Figure 7)	Pass
8	Verify that users cannot create an account with an already registered email address.	- The Login page is displayed. - Email tested is already registered.	1. Open application or admin dashboard. 2. Navigate to the login page. 3. Click on 'Register'. 4. Input registered email in the 'Email Address' input box	A message will display indicating that the email entered has already been registered, prompting the user to use an unregistered email.	An error message indicating that 'Email already registered' will be displayed, and the user will be required to use a different valid email address. (Figure 8)	Pass
9	Validate that the user	- Login page is	1. Open application or	A message	The message	Pass

	only enters valid inputs to create an account.	displayed.	admin dashboard. 2. Navigate to the login page. 3. Click on 'Register'. 4. Input valid information (number, email, matching passwords, name). 5. Observe the output.	indicating that the account has been created will be displayed, and the user will be able to sign in using that account.	'Account created successfully. Please sign in.' is displayed and saved into the database. The user will now be able to sign in using this account. (Figure 9)	
10	Verify that invalid inputs whenever creating an account is rejected.	- Login page is displayed. - Email tested is already registered. - Passwords entered do not match	1. Open application or admin dashboard. 2. Navigate to the registration page. 3. Input invalid information (number, email, matching passwords, name). 4. Observe what happens.	Specific error messages for each wrong or invalid input is displayed to prompt users to change.	Error messages including 'Passwords do not match', 'Email already registered; is displayed and the user will be required to change, or an account will not be created. (Figure 10)	Pass
11	Verify that the admin is able to delete user accounts.	- Administrator is logged into the admin dashboard. - Valid user account is shown in the list.	1. Open admin dashboard and login. 2. Navigate to the user's tab. 3. Select a user and click on the delete. 4. Click ok.	The user account should be deleted.	The admin will receive a pop-up prompt asking them to double confirm if they really want to delete that user. Users will then be	Pass

					deleted. (Figure 11)	
12	Verify that a legitimate QR code produced by the qr code generator is effectively validated.	- User has logged into the mobile application - QR code is operational and contains a legitimate signed JWT token. - QR code has not expired.	1. Launch the mobile application. 2. Login with a valid user account 3. Tap on scan QR code 4. Scan the QR code generated by the generator. 5. Wait until the verification process is finished. 6. Choose the "Open link" option	The QR code is verified successfully, and the user is redirected to the intended URL.	The user will be able to scan the QR code through the mobile app, be shown a message indicating that the QR code is valid and be prompted to open the link. (Figure 12)	Pass
13	Verify that any blacklisted QR code is rejected.	- The user logged into the mobile application. - The status of the QR code is 'Blacklisted' in the database.	1. Log into the mobile application. 2. Open the QR scanner 3. Scan the blacklisted QR code. 4. Observe the outcome.	A warning message indicating that the QR code is invalid should be displayed.	The mobile application will display an error message to the user showing that the QR code is blacklisted. (Figure 13)	Pass
14	Verify that expired QR code is rejected.	- User is logged into the application - The expiry date and time of the QR code has	1. Log into the application 2. Open the scanner 3. Scan the expired QR code. 4. Observe the output.	A message indicating that the QR code is invalid is displayed.	The application will let the user know that the QR code is expired and rejected by displaying the	Pass

		passed.			error message. (Figure 14)	
15	Ensure that a QR code that is not generated by our system is deemed invalid.	- The user is logged into the application. - Available QR code that is not generated by our generator.	1. Log into the application. 2. Open the QR code scanner. 3. Scan the QR code that is not generated by the admin. 4. Examine the verification of outcome.	The application detects that the QR code is invalid and displays warning messages 'Invalid' or 'Unsecure QR code'.	The user will be shown on the mobile application an error message which shows that the QR code is invalid. (Figure 15)	Pass
16	Verify that using the normal built-in android camera to scan the valid QR code will lead to a prompt for the user to download the mobile application.	- A valid QR code generated with the QR code generator. - The user uses the default android phone camera to scan the QR code.	1. Open the phone camera. 2. Scan the system-generated QR code. 3. Observe the prompt displayed.	The user will be given an APK link to download the mobile application.	The user will be redirected to a download link where he/she will then be prompted to download the mobile application and scan the QR code from there to access the QR code. (Figure 16)	Pass
17	Confirm that users are able to submit a QR tampering report.	- The user is logged into the application. - Available tampered QR code.	1. Log into the application. 2. Navigate to the QR code page. 3. Capture / upload a photo of the tampered QR code.	The report is stored in the database, and the status of the QR code will be shown to the user.	Users will be led to a page whereby they will be asked to fill in the details of the QR code they want to report and include their	Pass

			4. Enter the description 5. Optionally fill in name and contact details. 6. Submit the report.		personal information if they want to. (Figure 17)	
18	Confirming that scan telemetry and metrics are shown on the admin dashboard.	- Administrator logged into the dashboard. - Minimum of one QR code exists.	1. Log into the admin dashboard. 2. Stay on the metrics page. 3. Login to the mobile application and scan a valid QR code. 4. Refresh metrics page. 5. Observe the metrics page for scanning entry.	The scan metrics should be updated including location, device type, timestamp, validation results, and any other valid scan details.	Scan metrics is updated and displayed on the admin dashboard whenever any actions are taken such as registering an account and scanning. (Figure 3)	Pass
19	Confirm that administrators are able to assess the tamper reports submitted.	- Administrator is logged into the admin dashboard. - Minimum of one tamper report has been submitted.	1. Log into the admin dashboard. 2. Navigate to the Alerts page. 3. Filter reports if needed. 4. View a report.	The dashboard should display the submitted photo, description, reporter information (if provided), GPS location, and status of the report accurately.	Admins will be able to view all the tamper reports that were submitted including the description, image, status, and GPS location. (Figure 17)	Pass
20	Confirm that JWT is used for communication during communication with	- Supabase backend server is active and HTTPS is enabled.	1. Launch application. 2. Login or scan a QR code. 3. Examine the network	Every request is sent using JWT, guaranteeing communication	The authorization bearer line starts with 'eyJ' indicating that a JSON	Pass

	backend server and Supabase	- JWT is in use	requests through browser developer tools or a network proxy (if relevant). 4. Check under Authorization: Bearer line and starts with 'eyJ'	between a valid client and a backend.	header with a JWT token type was used. (Figure 18)	
21	Confirm that communication between the application and Supabase backend is encrypted using HTTPS.	- Application is installed. - Supabase backend is active - The devices are connected to the same network. - Wireshark is installed.	1. Start wireshark. 2. Launch mobile application. 3. Conduct actions that involve communication with Supabase. 4. Stop packet capture. 5. Filter traffic using tcp.port == 443 or TLS. 6. Examine the packets captured.	Network communication is transmitted through HTTPS/TLS (port 443) and that no HTTPS traffic that is unencrypted is detected.	Network trace indicates completed TLSv1.3 handshakes and QUIC 'Protected Payload' which verifies that all database responses and data payloads are completely encrypted. (Figure 19)	Pass
22	Verify that the admin is able to help new users create an account using the 'Add user' function in the admin dashboard itself with valid inputs.	- Admin is logged into the admin dashboard. - Valid inputs are used for user details.	1. Log into the admin dashboard. 2. Navigate to the user's tab. 3. Click Add User. 4. Input the user's role, email, password, and name. 5. Clicks create user.	The user should be created with the specified roles.	The user account has been created successfully with their roles displayed on the admin dashboard. (Figure 20)	Pass

			6. Look at the outcome.			
23	Verify that any invalid input in the 'add user' function in the admin dashboard will prevent the creation of a new account.	- Admin is logged into the admin dashboard.	1. Log into the admin dashboard. 2. Navigate to the user's tab. 3. Click Add User. 4. Input invalid inputs. 5. Observe outcomes.	The user account will not be created, and error messages will be displayed prompting the change of specific parts.	The user account cannot be created, error messages will be such as password needs to be min 8 characters long, password does not match and invalid. (Figure 21)	Pass
24	Verify that a reasonably length of URL does not matter as long as it is a valid link.	- QR code with a long is generated. - The user is logged into the application. - The user must be logged into the application.	1. Log into the admin dashboard. 2. Generate the QR code. 3. Log into the application. 4. Navigate to scan. 5. Enable camera. 6. Scan the QR code. 7. Observe the outcome.	The QR code should redirect the user to the intended URL.	The user will be able to redirect to the intended page. (Figure 22)	Pass
25	Verify that the admin generated QR code with the invalid URL will be rejected.	- The admin must be logged into the dashboard. - The user must be logged into the application.	1. Log into the admin dashboard. 2. Generate a QR code with an invalid URL. 3. Log into the application. 4. Navigate to scan. 5. Scan the QR code.	The user should not be redirected to the URL, and an error message indicating that the QR code is invalid should be displayed.	The user was able to be redirected to the invalid URL. (Figure 23)	Fail

			6. Look at the outcome.			
26	Verify that the APK link for the application to download does not include any viruses.	- The application is active. - The APK link is accessible. - An interface for accessing an aggregate threat scanner is present.	1. Copy the APK link. 2. Open VirusTotal on the web. 3. Click the URL tab and paste the copied APK link and press enter. 4. Click the FILE tab and drop the .apk file that was downloaded. 5. Verify the output.	No virus should be detected.	No virus was detected. (Figure 24)	Pass
27	Verify that URL redirection finishes within the necessary performance limit of 3 seconds or less.	- A valid QR code is generated and is active. - User must be logged into the mobile application. - Having a stopwatch / timer ready.	1. Open the mobile application. 2. Navigate to the QR scanner. 3. Scan the valid QR code generated. 4. Start timer at the same time when tapping 'Open link'. 5. Stop the timer as soon as the webpage loads on the device. 6. Record the time taken.	The redirection occurs in 3 seconds or fewer from whenever the user clicks the link until the intended URL loads.	The redirection occurs in 1.8 seconds. (Figure 25)	Pass

Figure 1:

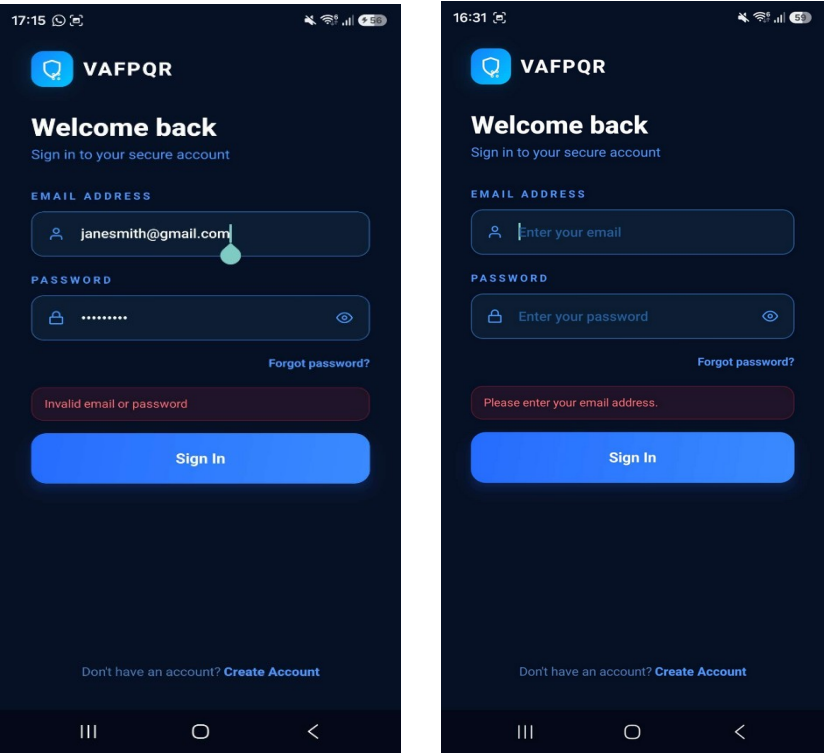

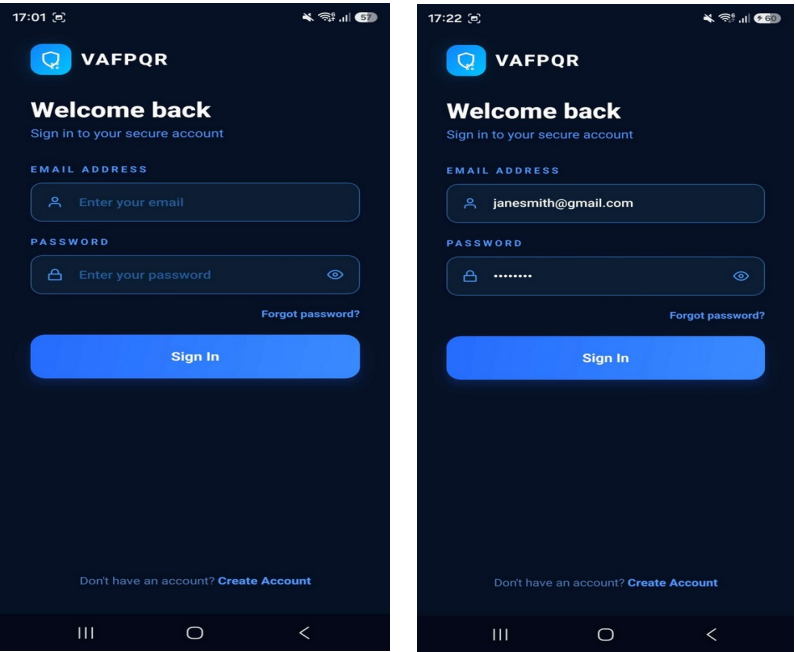

Figure 2:

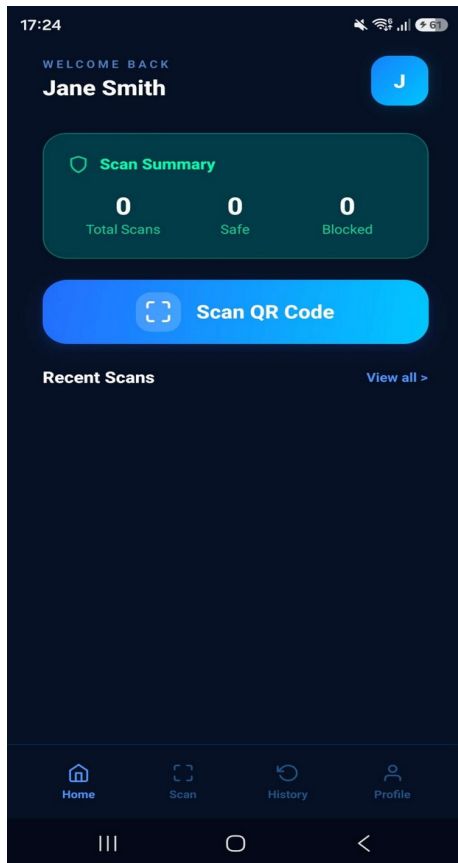

Figure 3:

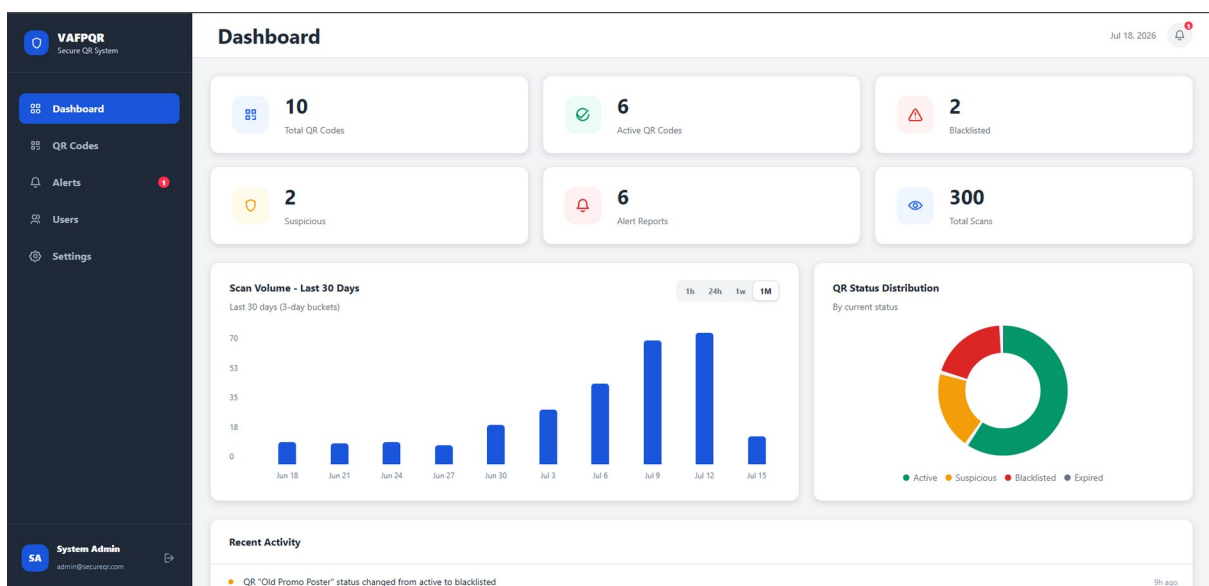

Figure 4:

The figure displays two side-by-side screenshots of the VAFPQR login interface. Both screens feature a blue header with the VAFPQR logo and the text 'Secure QR Code System'. The left screen shows the 'Sign In' tab selected, with a message 'Sign in to your admin account' and a red error box stating 'Invalid email or password'. The email address 'admin@secureqr.com' is entered in the 'Email Address' field, and the password field is masked with dots. A blue 'Sign In' button is at the bottom, with a 'Forgot Password?' link below it. The right screen shows the 'Sign In' tab selected, with a message 'Sign in to your admin account' and a red error box stating 'Email address and password are required.' The email address 'admin@vafpqr.gov' is entered in the 'Email Address' field, and the password field is masked with dots. A blue 'Sign In' button is at the bottom, with a 'Forgot Password?' link below it.

Figure 5:

The figure displays a single screenshot of the VAFPQR login interface. The screen features a blue header with the VAFPQR logo and the text 'Secure QR Code System'. The 'Sign In' tab is selected, with a message 'Sign in to your admin account' and a red error box stating 'This account does not have admin access.' The email address 'JaneS@gmail.com' is entered in the 'Email Address' field, and the password field is masked with dots. A blue 'Sign In' button is at the bottom, with a 'Forgot Password?' link below it. At the bottom of the screen, there is a demo login information box showing 'Demo: admin@secureqr.com / Admin2026secure' and a 'No account? Register here' link.

The figure displays three sequential screenshots of a mobile application's 'Create Account' screen. Each screen features a dark blue background with white text and input fields.

- First Screenshot (Left):** Shows the initial form with fields for 'FULL NAME' (Jane Smith), 'EMAIL ADDRESS' (Janesm@gmail.com), 'PHONE NUMBER (OPTIONAL, 8-16 CHARACTERS)' (569), 'PASSWORD' (masked), and 'CONFIRM PASSWORD' (masked). Below the fields are links for 'Terms of Service' and 'Privacy Policy', a 'USER ACKNOWLEDGEMENT' section with three checked checkboxes, and a red error message: 'Phone number must be between 8 and 16 characters.'.
- Second Screenshot (Middle):** Shows the form with a 'Password must be at least 8 characters.' error message. The 'PASSWORD' field now contains 'pi'.
- Third Screenshot (Right):** Shows the form with a 'Passwords do not match.' error message. The 'PASSWORD' field contains 'pickaboo' and the 'CONFIRM PASSWORD' field contains 'pickaboot'.

Figure 11:

The screenshot shows a user management interface with a table of users. The user 'Jaden smith' is selected, and a confirmation dialog is displayed.
